Graduate Students

Introduction
The content of graduate education has come under criticism for not adequately preparing graduate students for professional work. This section starts with articles on new directions in designing and teaching graduate seminars and then provides links to resources on the broader issue of improving graduate education.

Course Design

The author describes her experiences teaching small graduate seminars and raises issues of how to approach a graduate seminar, where to begin, what and when to teach, and what kind of teaching/learning environment to encourage.

"Re-envisioning Teaching Graduate Seminars," Anton Rosenthal, University of Kansas, Center for Teaching Excellence.
Explains the author’s planning process for a graduate seminar in Sociology that would be more relevant for graduate students than the traditional seminar approach. Includes course goals, course description, examples of student work, and the author’s reflections on the new course design.
http://cte.ku.edu/portfolios/rosenthal [2]

This paper reports on a graduate seminar in Sociology in which the goal of the course was a collaboratively written paper reviewing the literature in the area under study. Includes a review of research in active learning, experiential learning, and professional development, plus a full description of the course.

Graduate Education

Re-envisioning the Ph.D. (University of Washington Graduate School). Although this project, funded by the Pew Charitable Trusts, ended in June 2003, the school continues to maintain this site. It provides a useful set of resources for improving doctoral education, including an extensive bibliography of print and online resources, promising practices, resources for doctoral students, and related links.

“The Disconnect between Graduate Education and the Realities of Faculty Work: A Review of Recent Research,” Jerry G. Gaff. Liberal Education, Summer 2002, Association of American Colleges and Universities. Reviews recent studies of the graduate student experience, studies of new faculty, and studies of Ph.D. alumni. Concludes that these studies document the need for doctoral programs to better prepare students for professional work. Calls for the development of new models for graduate education.

Resources for Graduate Education, Derek Bruff, Vanderbilt University, Center for Teaching. A comprehensive site designed to provide resources on graduate education for department chairs, directors of graduate studies, graduate faculty, and graduate deans. Contains annotated links to research on graduate education and recent initiatives aimed at improving graduate education.
